

EXTENDED TECHNICAL SKILLS

First and foremost, our approach is based on mastering various technical areas relating to firefighting systems and installations. A continuous improvement process ensures that the experience acquired daily on our various projects enhances this technical expertise. Your project is not limited to fire detection and protection systems... neither are our skills! Our approach covers every aspect of your project (smoke extraction, fire water drainage and containment, etc.) in addition to all related work (civil works, external works, electricity, etc.).

ADAPTABILITY

Strict compliance with a standard or implementation of effective systems. We use our technical and regulatory expertise to closely match our clients' needs and resources.

Our Approach

Cyrus Industrie has been providing from ad-hoc technical assistance missions to the management of an entire project over several years.

CONTROL OVER COSTS AND LEAD TIMES

A project is only successful if it is completed within the estimated budget and schedule! We draw on our significant experience across many disciplines to determine the budget allocation and the operational schedule from the preliminary phases through to acceptance of the installations.
